

CompStar™ Medical Bill Review Software PRODUCT SHEET

Personalized, Integrated and Automated Bill Review Software for Workers' Compensation

Complete Integrated Solution

How do you ensure that your company is maximizing its profitability in handling workers' compensation bills?

CompStar Systems, Inc. introduces **CompStar™**, a personalized, integrated and automated solution for reviewing your workers' compensation bills. It delivers a high level of fee schedule automation to maximize your workers' compensation savings. It features a powerful yet flexible workflow allowing complete control of your data, as well as an intuitive user interface design enabling your employees to be productive quickly.

The Bill Review Process

Accuracy and efficiency are the foundation of a profitable bill review operation. Maximum savings can be achieved only if bills are re-priced accurately. Insurance companies, third-party administrators, and public entities are subject to mandated response and payment times that require streamlined operations. Everyday that a bill is open increases its administrative costs further. How can you streamline your operations?

Performance

CompStar™ includes a robust and powerful data-driven workflow engine designed to boost bill review productivity. Bills are automatically routed to the appropriate resources based on data-driven business rules. Personalized portals ensure that users have quick access to the information they need to conduct their tasks. **CompStar™** also includes detailed tracking utilities providing a real-time view of bill operation productivity.

Accuracy

CompStar™'s comprehensive bill review engine re-prices according to data-driven schedules and rules, guaranteeing that bills are re-priced appropriately. Additionally, it applies a variety of checks to ensure that duplicate bills are detected and appropriately handled.

Low Total Cost of Ownership

Performance is a success driver only if accompanied with affordability. **CompStar™** is a browser-based solution hosted in an application service provider (ASP) environment. Maintenance is seamless. Our hosted solution means that no local software installation is necessary – all you need is a compatible web browser, and it virtually eliminates the need for application administrators. Web-based means each user can access the application where internet access is available. **CompStar™** is built on technologies that allow seamless integration with existing enterprise applications.

Security

Security is of paramount concern especially when data travels over the internet. **CompStar™** employs Secure Sockets Layer (SSL) to transmit data securely over the public internet. **CompStar™**'s database sits behind firewalls and utilizes strict security measures. Each **CompStar™** page is also secured and available only to authorized users.

Flexibility

CompStar™ is built on technologies that allow for seamless integration with external systems. Data feeds from multiple sources are supported and can be scheduled. Intelligent interface design provides flexibility for customization. **CompStar™**'s workflow is driven by a set of automated rules which can be adapted to your business processes.

Robust Reporting

CompStar™ provides detailed and summary reports that can be generated ad-hoc or via subscription. Subscription services allow the user to specify frequency, delivery mechanism and recipient of a particular report. Reports can be delivered in a variety of ways: previewed, saved to a file, emailed or printed.

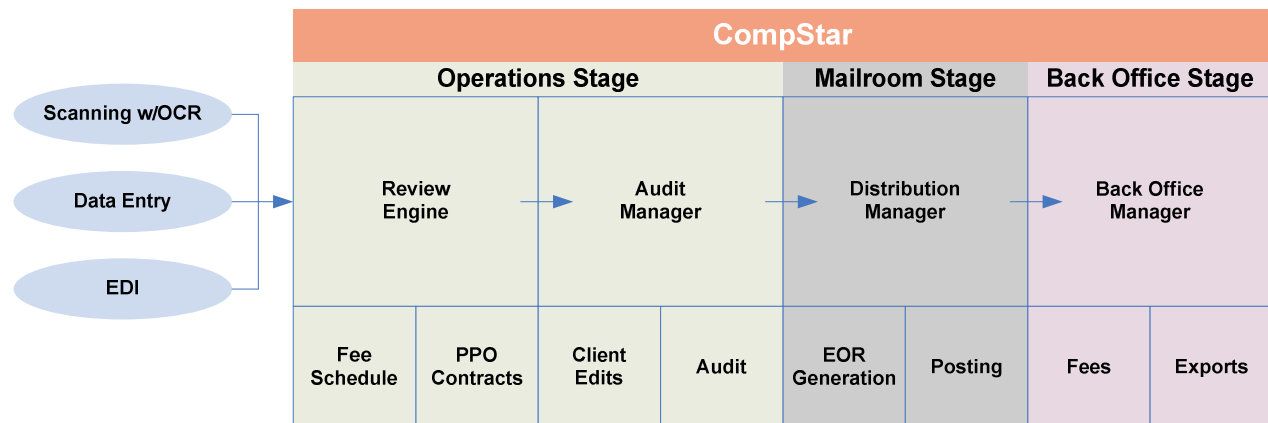

CompStar™ Medical Bill Review Software

PRODUCT SHEET

FEATURES

- Browser based application - no software to install on the workstation
- Uses only Microsoft® Internet Explorer on the client computer
- High-speed data entry
- Automated fee schedule re-pricing
